

INESFLY SOLUTIONS FOR BED BUGS CONTROL

Bed bugs (*Cimex Lectularius*) are blood-sucking insects that cause significant discomfort to humans due to their bites, and despite not being involved in the transmission of any disease, they are a source of annoyance and anxiety during rest.

Bed bugs are re-emerging in many countries due to the movement of people, mostly due to their presence in luggage and other belongings.

Hotels and other touristic residences are often the primary focal point of infestation. From there they spread to private residences where they are fairly easily established.

INESFLY products allow safe, effective, and residual treatments against this pest. The combination of **pyrethroid insecticides** and the **growth regulator pyriproxyfen**, provides rapid knockdown and mortality, complemented by the effects on molting processes in nymph states.

The application of **INESFLY** formulations is simple and appropriate for surfaces where bed **bugs are** generally hidden, such as wood and textiles.

INESFLY EM HOUSE IGR NG

Alpha-cypermethrin, D-Allethrin, Pyriproxyfen

Ready-to-use aqueous dispersion for surface treatment by spraying application.

- Treatment of the bed (frame, legs, box spring, mattress) and other nearby surfaces such as baseboards and furniture.

INESFLY SP COATING

Alpha-cypermethrin, D-Allethrin, Pyriproxyfen

Transparent insecticide coating for application by aerosol spray or brush-roller as a conventional paint.

- Treatment of cracks in furniture or baseboards with the aerosol spray.
- Application on rear areas of furniture.

PROCEDURE FOR ELIMINATION OF BED BUGS

Bed bugs are one of the most difficult pests to control, due to the difficulty of finding and accessing their refuge areas in a complete way.

The action procedure to eliminate these insects requires exhaustive compliance with the following steps:

- Empty closets and drawers of clothes and other objects.
- Remove sheets and mattress covers from the bed. Water soluble bags can be used to get clothes directly from the cabinets to the washing machine.
- Wash clothes at the highest possible temperature.
- Vacuum the interior of cabinets, drawers, carpets, sofas, curtains, mattresses, and furniture located in the bedroom.
- Disassemble wall lamps and sockets.
- Apply **INESFLY EM HOUSE IGR NG** on the bed base, bottom and side of the mattress, cracks in the skirting boards, joints in the cabinets and furniture, joints in the window frames, legs of the bed and sofas, back of frames and furniture, curtains, carpet boards, drawer rails and other hidden parts where they can take shelter.
- Apply **INESFLY SP COATING** to access very narrow joints that are difficult to access thanks to the pressure of the spray, such as bed base and furniture joints.
- Inspect the mattress, box spring, cabinets, etc. after 14 days and repeat treatment if the presence of bedbugs is detected.
