

INESFLY SOLUTIONS FOR THE CONTROL OF COCKROACHES

Cockroaches, in particular *Periplaneta americana* and *Blattella germanica*, are the most important urban pests in the world.

These species have found in sewers and homes the ideal places to settle and proliferate, due to the fact that they have almost unlimited sources of food, shelter and adequate environmental conditions.

The ways in which *cockroaches* affect **human health** are diverse. On the one hand, these insects can contaminate food with their excrements molts, odors and the pathogen microorganisms.

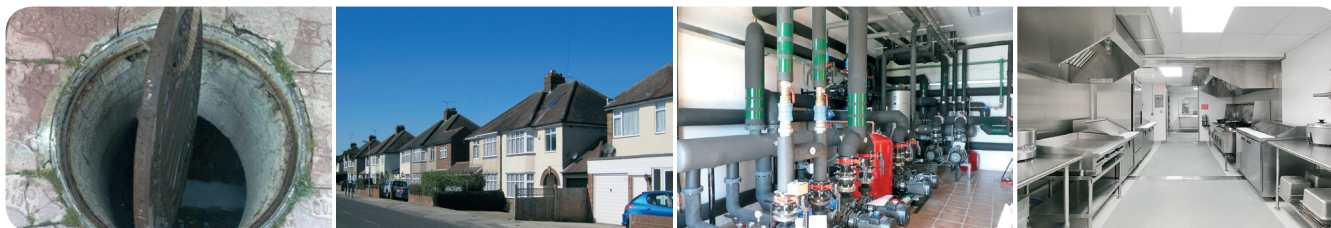

Contaminated food can cause indigestion, vomiting and diarrhea to those who consume it.

Cockroaches are also responsible of allergic reactions in people after exposure to environments where there are insect residues, feces and saliva.

INESFLY insecticidal products have a high residual effect against **cockroaches** in places such as sewers, warehouses, basements, kitchens and the food industry.

Specie	Description	Location	Habitat
<i>Blattella germanica</i> 	10-15mm adults. Yellowish brown color with a clear central band.	Indoors	Food preparation areas, food stores, kitchens, bathrooms.
<i>Periplaneta americana</i> 	Adults 30 to 70mm. Russet color. Great flight capacity.	Outdoors Indoors	Warm areas and high humidity. Sewers. Hot areas and high humidity.
<i>Blatta orientalis</i> 	Adults up to 30mm. Black color.	Outdoors Indoors	Water meters, basements, underground structures, sewers. Very humid and cool areas.
